A	Spacing Controls
---	------------------

PRO TIPS: #1 SAVE OFTEN

- Bricks Appear in the Order Used In "My Bricks". Use this to Plan Ahead. If you're going to use In your FontStruction(™) Place Temporarily In one of the last Letters Like "~" So you'll Have them in order in your palette. You can delete these when you reach "~".
- Use and Lock Guides to get Consistent Letter Spacing
- You Can Use CUT (X) To quickly delete things
- You Can Greatly Simplify "My Bricks" with the use of a single selection and transforming that element as you need it. Using two bricks and transforming them as needed saves you from using 8 blocks and cluttering your "MY BRICKS"

- Fonts are all about ratios, a good looking font will have consistent ratios. Extra EXTRA Guides can be a good tool to use
- Check the preview after every letter. Test out various sentences and letter combinations to get the spacing right. You Can Use the Width Guide For each Letter Individually
- Making Fonts is a Skill. The more Fonts you make the better you'll get at it. Try making your own version a basic Font Like Arial for a Sans Serif Font or Times New Roman For a Serif Font.
- Be Patient. Making a great font will take a lot of time
